

Capability, Capacity, and Cost

it's about expertise, results, and economics

it's about

VoluMill™

Focused Expertise

There is only one company in the world today focused solely on ultra high-performance toolpaths engineered for bulk material removal – Celeritive Technologies, the developers of VoluMill™.

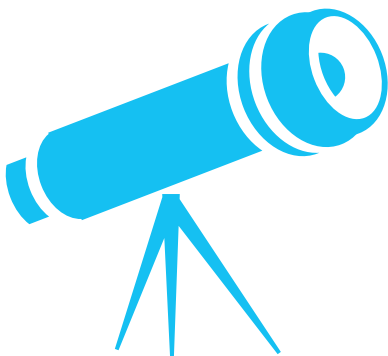

Because of Celeritive’s unique focus, and the fact that VoluMill is independent from any one CAM technology, Celeritive is able to develop meaningful partnerships with many of the industry’s leading manufacturers, including machine tool and cutting tool manufacturers. It is through these relationships that Celeritive is able to gain valuable knowledge, and use it to solve the industry’s most challenging issues.

Proven Results

World-renowned cutting tool manufacturers, machine tool builders, thousands of strong minded manufacturing engineers, and seven of the World’s leading CAM companies can’t all be wrong.

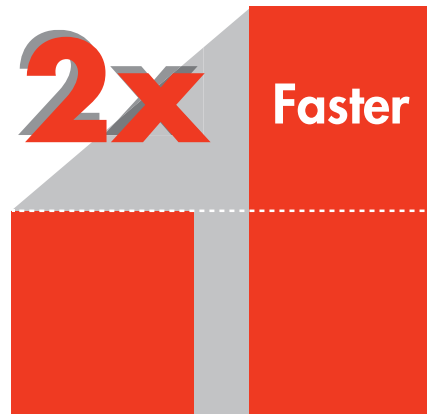

So why have so many of the world’s leading manufacturing companies adopted VoluMill? Maybe it’s because they have realized significant increases in production capacity. Or maybe it’s because they have saved tons of money related to consumables costs. Those are just two of the many reasons we often hear. But the most common reason we hear from all of our customers is: “Because it works.”

Realized Economics

Manufacturing companies throughout the world are reporting significant efficiency gains that were previously thought to be impossible. In fact, the economic gains were so impressive that large Manufacturers immediately introduced VoluMill to their supply chain to reduce costs, increase capacity, and shorten lead time requirements. What's making these results possible? When Celeritive's engineers developed VoluMill, they not only created a solution that evens the loads on machine tools and cutting tools, enabling them to cut faster and deeper while under greatly reduced stress, they created an opportunity for manufacturers to produce more parts in less time at lower costs – on existing equipment that now lasts significantly longer.

So, how can you increase production capacity while reducing costs?

It's actually easier than you think.

Getting started with VoluMill is fast and easy. There are no special requirements, it's easy to learn and use, and there are little or no disruptions to your current workflow. The fact is, you could purchase and download VoluMill this morning, attend an online training session at noon, and start saving money by 3 p.m. — It's that easy.
